

East Nesson

GAS & WATER PIPELINE EXPANSION

Liberty Midstream Solutions (LMS) successfully executed a substantial pipeline expansion in East Nesson to support Bakken development. LMS added 10 miles of low pressure gas gathering service lines and 4 miles of produced water gathering lines.

Reduce Flaring

This expansion supports NDIC regulations to reduce gas flaring in North Dakota by gathering and processing gas at the wellhead to create marketable liquids and residue gas.

Reduced Truck Traffic

The produced water gathering provides reliable and safe handling. It eliminates more than 35 trucks per day that would otherwise be traveling on local roads.

MONITORING

The gathering system is remotely monitored from LMS's County Line Gas Plant, which includes delivery locations equipped with automated control systems to minimize risk to the environment and safety while maximizing reliable operations.
